

TMS 500 Concurrent Users Cost Estimate

Recommended hosting budget for running the Vercel + Supabase TMS smoothly for 500 active concurrent users.

Recommended Monthly Budget	Rs. 15,000 to Rs. 20,000 / month
Best starting setup: Vercel Pro + Supabase Pro + Supabase Large compute. This gives healthier database capacity and leaves room for bandwidth, functions, and logs.	Practical total: \$145 to \$175 / month Approx India cost: Rs. 14,000 to Rs. 17,000 / month Before GST, card fees, and usage spikes.

Estimated Monthly Cost

Item	Recommended Plan	Monthly Cost	Purpose
Vercel	Pro, 1 seat	\$20	Frontend hosting, serverless functions, deployment, bandwidth.
Supabase	Pro plan	\$25	Production database project, backups, API, auth, and platform limits.
Database compute	Large recommended	\$110 minus \$10 compute credit	Main capacity upgrade for smoother concurrent usage.
Usage buffer	Bandwidth, functions, logs	\$10 to \$30	Reserve for traffic spikes and overage safety.

Options

Setup	Approx USD	Approx INR	When to choose
Minimum possible	\$95 / month	About Rs. 9,000 / month	Can work if usage is light and queries are optimized, but not a strong 500-user guarantee.
Recommended	\$145 / month	About Rs. 14,000 / month	Best first choice for 500 active users with a smoother experience.
Extra safe	\$250+ / month	About Rs. 25,000+ / month	Use if load testing shows high database CPU, slow queries, or frequent spikes.

Recommendation

For this TMS, start with **Vercel Pro + Supabase Pro + Supabase Large compute**. Enable Supabase connection pooling, keep database queries indexed, cache dashboard data where possible, and then run a 500-user load test before final production launch.

If the load test shows slow database response, high CPU, or connection pressure, upgrade Supabase compute to XL. That is when the monthly budget may move closer to Rs. 25,000/month.

Note: Pricing and exchange rates change over time. This estimate is based on current public pricing checked on 24 May 2026 and an approximate USD to INR conversion.
