

Transportation Management System

Feature & Daily Operations Report

A practical overview of the ESPL TMS modules, user roles, and how each feature supports everyday logistics operations.

Project	ESPL TMS
Prepared For	Operations, Finance, Compliance, and Admin Teams
Focus	Features, roles, and real day-to-day usage

Executive Summary

This project is a transportation control tower for managing trucks, drivers, trips, yard operations, compliance, billing, payroll, maintenance, inventory, and reporting. It brings daily logistics work into one role-based system so each team can focus on the decisions they own.

Operational Control	Dispatch, fleet, yard, weighbridge, and maintenance modules help keep truck movement organized from assignment to gate exit.
Financial Visibility	Billing, manual finance entries, payroll, inventory costs, and Excel exports help finance track money movement.
Risk Reduction	Compliance, legal, tyre checks, and document review reduce unsafe dispatches and missing paperwork.

Role Summary

Role	Day-to-Day Responsibility
Sys Admin	Full access, system settings, user oversight, and operational supervision.
Dispatcher	Trip creation, truck-driver assignment, yard movement, fleet visibility, and daily operations.
Finance Officer	Billing, invoices, 3-way matching, payroll, maintenance costs, inventory costs, and exports.
Compliance Officer	Document verification, legal checks, safety status review, and compliance alerts.
Management	Dashboard KPIs, performance monitoring, cost visibility, and downloadable reports.

Feature Catalogue

The table below lists the available modules and explains their practical role in daily logistics work.

Feature	What It Does	Role in Day-to-Day Life
Role-Based Login & Registration	Controls access using selected roles: Sys Admin, Dispatcher, Finance Officer, and Compliance Officer. Login now validates that the selected role matches the account role stored in the database.	Prevents users from entering the wrong operational area and keeps responsibilities separated.
Executive Dashboard	Shows revenue, expenses, net margin, active trips, fleet utilization, reconciliation queue, revenue charts, and purchase order usage.	Gives management a daily control-tower view without checking every module manually.
Trip Dispatch & Purchase Orders	Links truck, driver, purchase order, source, destination, quantity, distance, and status into a dispatch record.	Helps dispatchers assign loads and keep customer contracts moving.
Fleet Control	Tracks truck plate, model, capacity, type, health, availability, and compliance status.	Shows which vehicles are ready, on trip, or unavailable.
Driver Duty Logs	Maintains driver profile, license number, phone, salary, status, safety score, and compliance information.	Helps operations pick qualified and available drivers.
Yard & Bay Queue	Manages terminal bay occupancy, yard queue, gate dwell time, and truck search.	Reduces congestion and supports orderly loading/unloading movement.
Weighbridge Weighing	Records truck plate, material, gross weight, tare weight, net weight, seal number, and verification status.	Creates trusted weight evidence for gate, billing, and shrinkage checks.
Workshop & Repairs	Creates maintenance orders with vehicle, defect description, severity, cost, and status. Finance Officer can access it.	Tracks repair work and maintenance spending.
HR & Payroll Center	Manages employee or driver name, email, department, base salary, transit allowance, safety score, and join date.	Supports salary and allowance tracking for daily payroll operations.
Billing & Matches	Shows invoice ledger, 3-way matching, payment status, and manual finance entries.	Lets finance verify invoices before payment and record operational expenses.
Manual Finance Entry	Allows Driver Salary and Maintenance Service entries with totals and a manual ledger.	Captures extra costs that may not come from automated trip or invoice flows.
Compliance	Handles driver and vehicle document checks with approved, rejected, and pending states.	Prevents expired, unsafe, or non-compliant assets from entering operations.
Inventory / Store & Spare Parts	Tracks spare parts, stock levels, reorder points, cost, and supplier/category details.	Helps avoid repair delays caused by missing parts.
Tyre Inspection	Supports tyre-related checks and inspection tracking.	Reduces breakdown risk and improves road safety.
Legal / Corporate Compliance	Tracks legal and corporate compliance items.	Keeps management aware of obligations, deadlines, and regulatory status.
System Settings	Admin-only area for system configuration and operational settings.	Gives administrators control over system-level setup.

Feature	What It Does	Role in Day-to-Day Life
Excel Export With Filters	Every dashboard section has Export Excel. It detects visible tables, supports table selection, global search, column filters, and downloads Excel-compatible files.	Makes reporting fast for billing, payroll, trips, drivers, fleet, maintenance, compliance, and other records.
Supabase Database Integration	Uses Supabase/Postgres through Prisma for users, drivers, trucks, trips, purchase orders, weigh tickets, and invoices.	Stores core operational records behind the system.

How Teams Use It Daily

Daily Stage	System Support
Morning planning	Management reviews dashboard KPIs, dispatchers check fleet and driver availability, and finance checks pending billing work.
Trip assignment	Dispatcher assigns a truck, driver, source, destination, and purchase order. Yard and bay teams prepare movement inside the terminal.
Gate and weighing	Weighbridge records weight evidence, yard teams track dwell time, and compliance teams monitor document validity.
Maintenance and inventory	Workshop records repair orders, inventory tracks spare parts, and finance monitors service costs.
Billing and reporting	Finance runs invoice matching, marks payments, records manual entries, and exports filtered Excel reports for review.

Overall Purpose

In simple terms, this system helps a transport company reduce manual paperwork, control costs, track vehicles, verify documents, manage invoices, and keep daily operations organized. It connects operations, finance, compliance, and management into one working view.
